Informating:

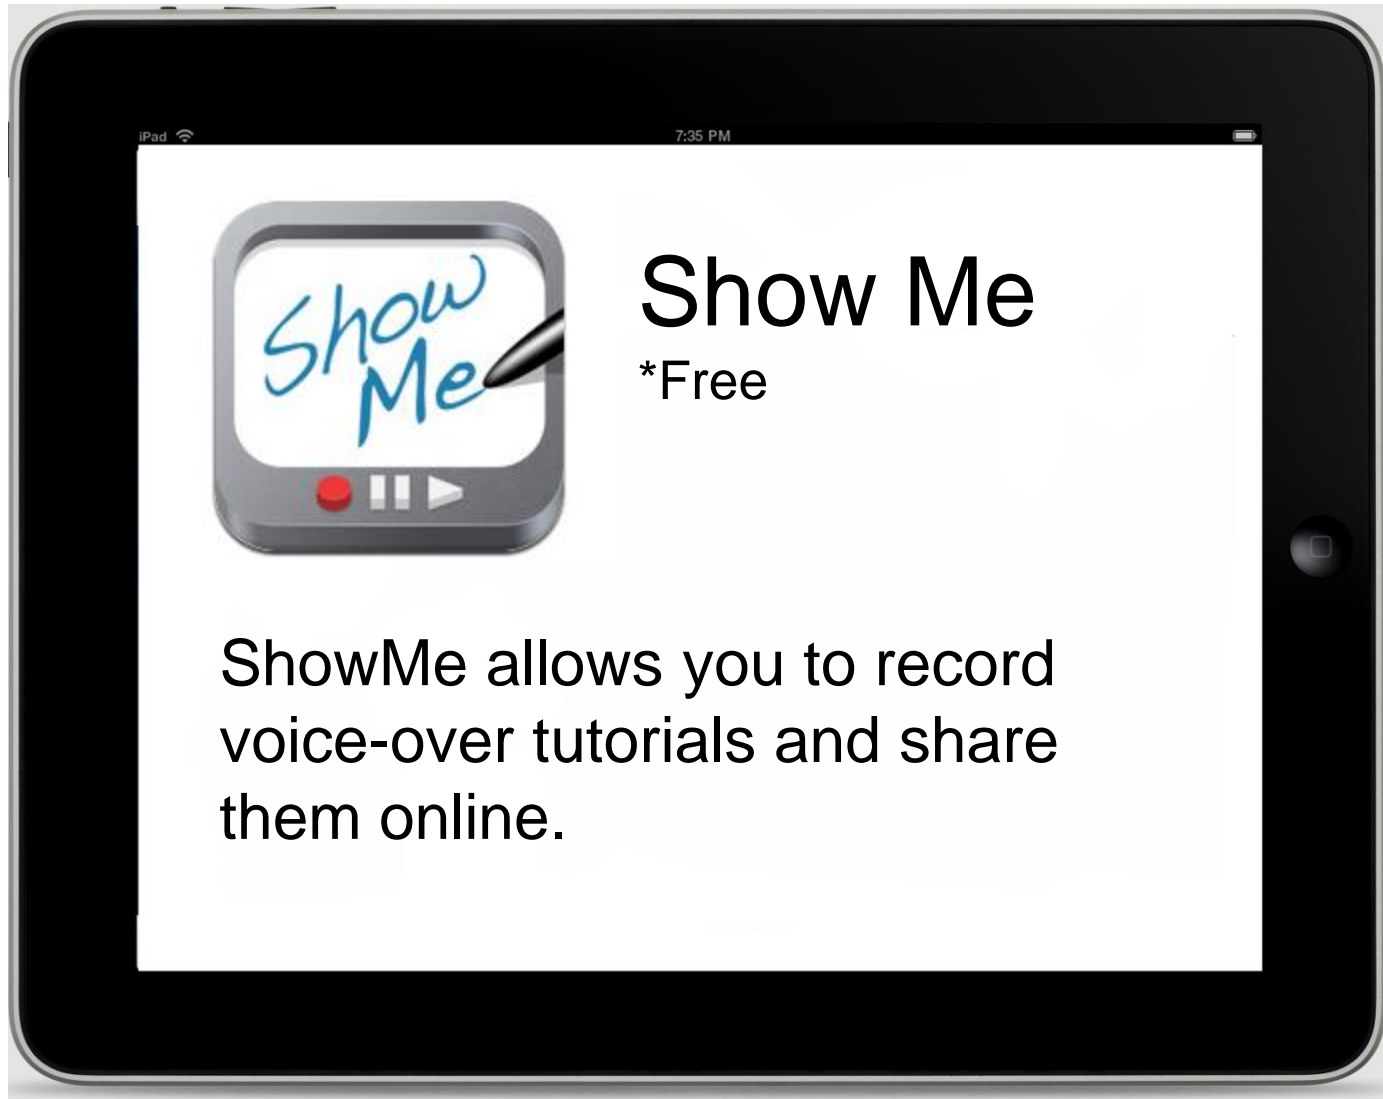

Informating is a more powerful way of thinking about technology than automating. While informating can lead to a much higher quality improvement, it is much more difficult to implement. What makes it more powerful is a shift of control and empowerment. In an informed environment, more people have timely access to information.

~Alan November, Empowering Students With Technology 2009

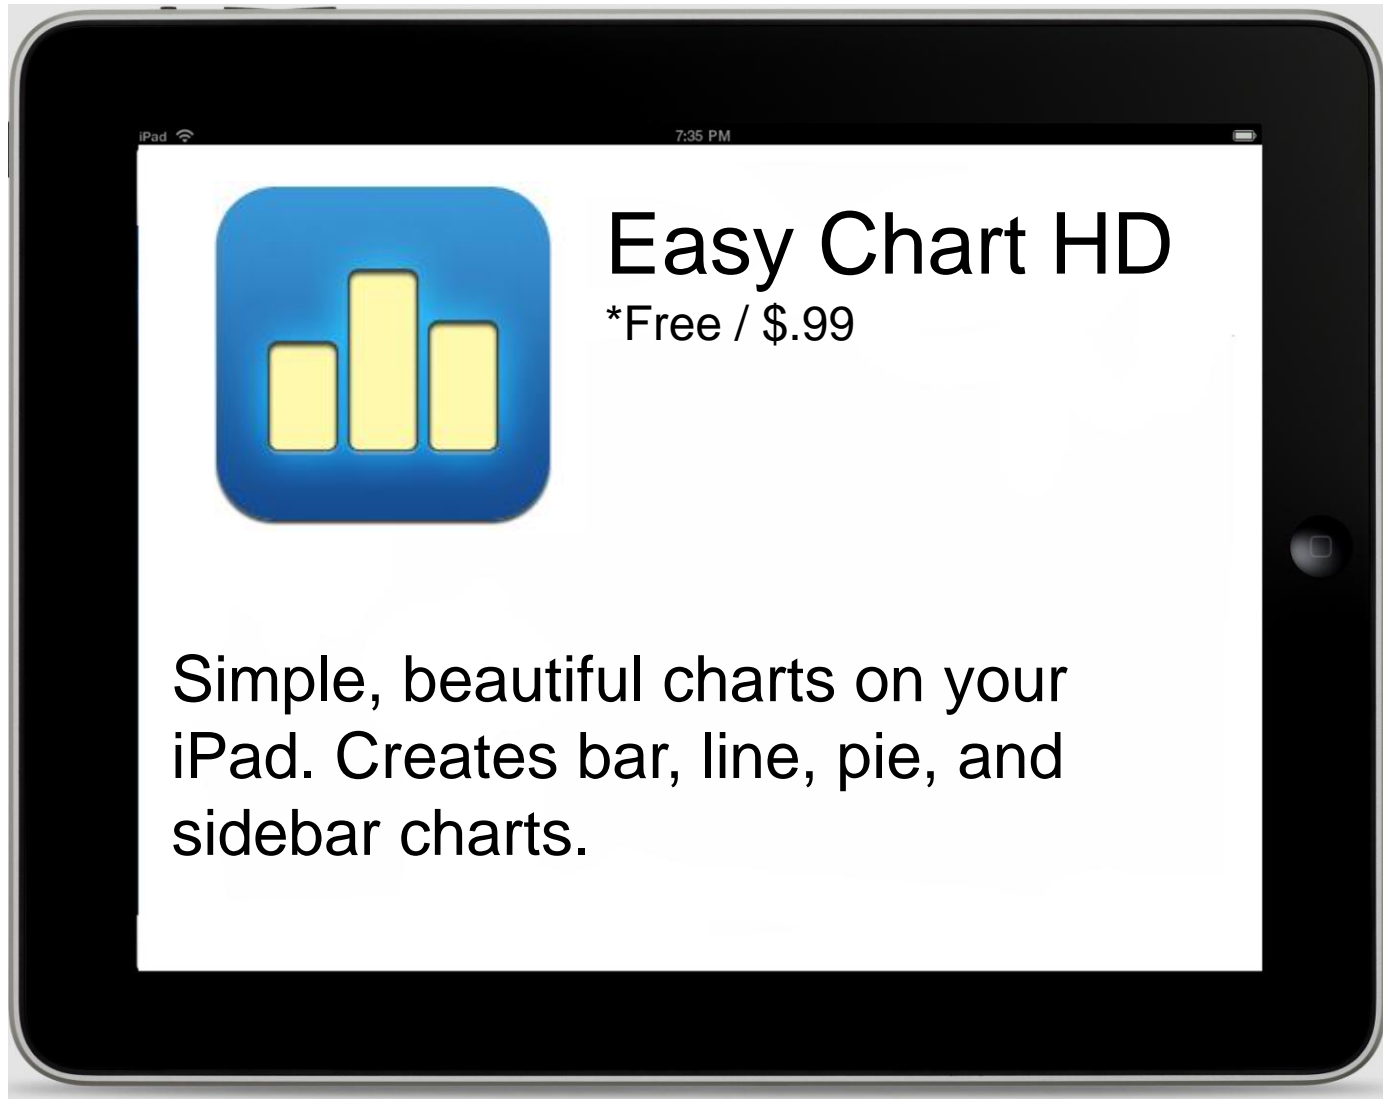

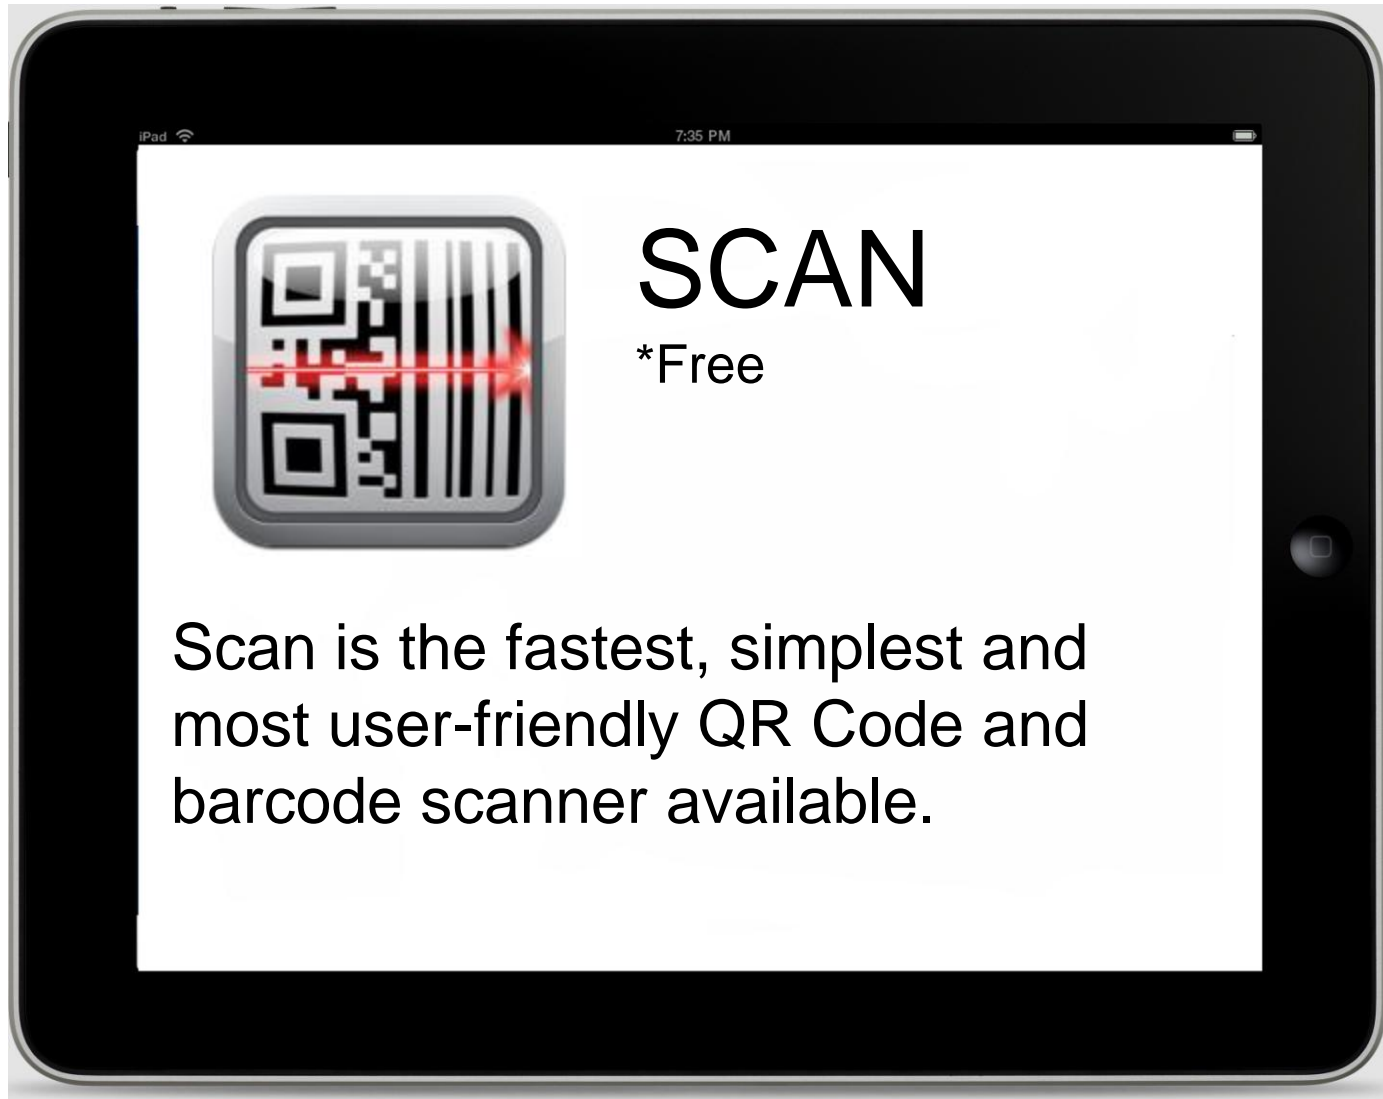

So what does this mean?

- Student Centered Work
- Shift from Consumer to Producer
- Authentic & Alternative Instructional Practice Opportunities

ShowMe allows you to record voice-over tutorials and share them online.

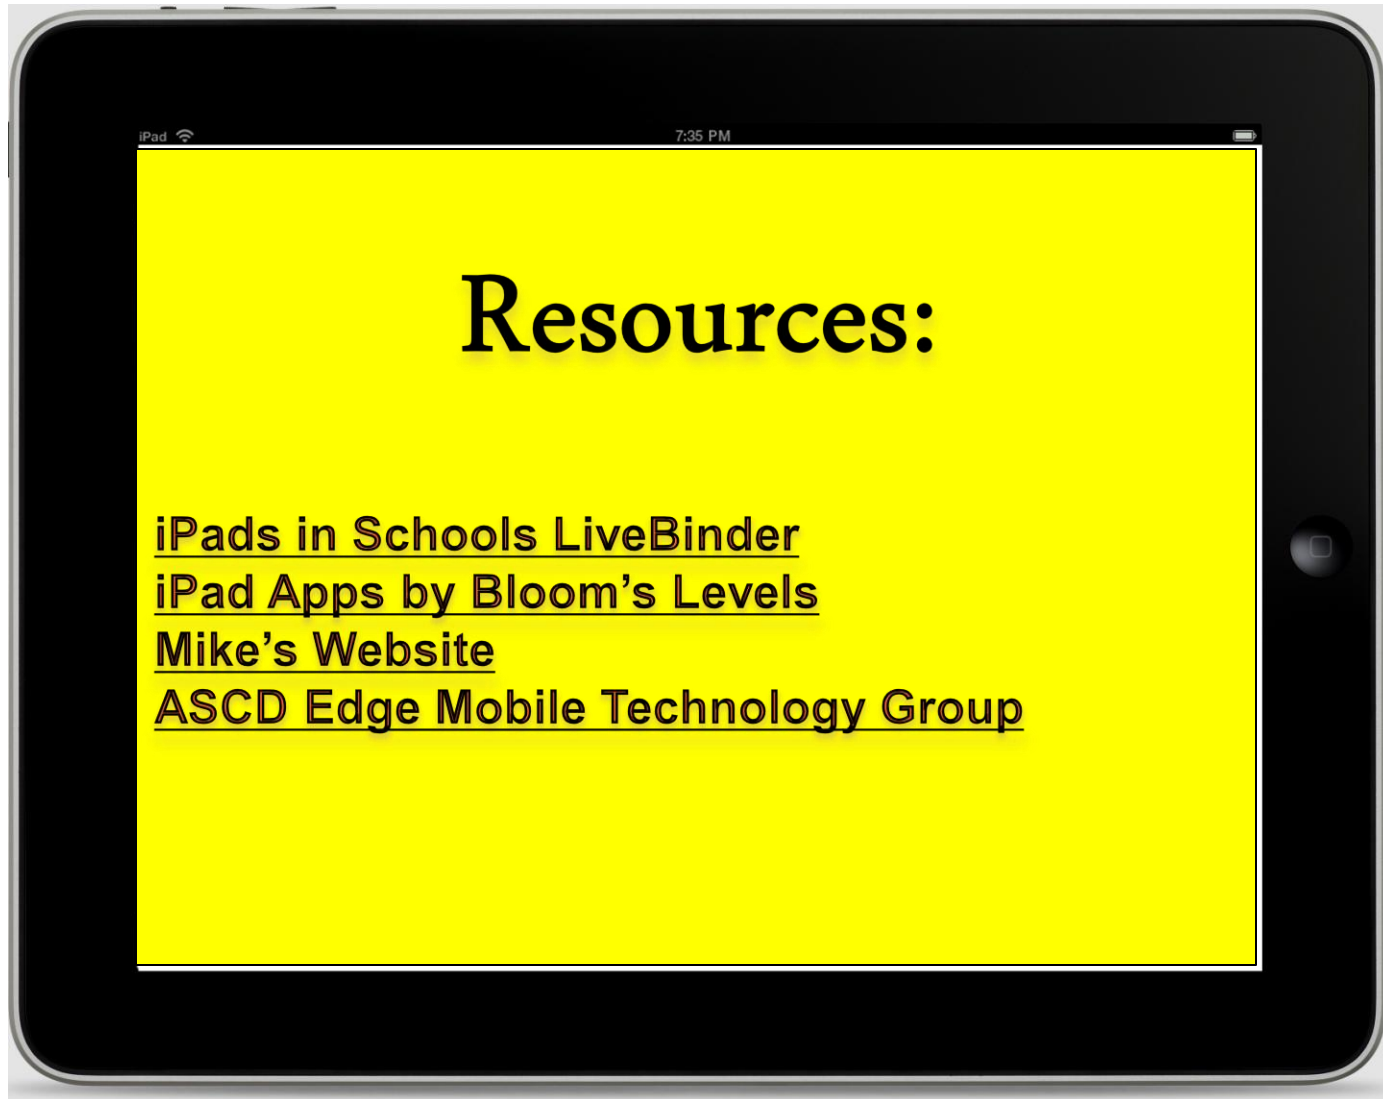

Amplifying:

Amplifying essentially means moving beyond the classroom, broadcasting to a global audience, allowing for a larger, broader audience. Amplification is all about the publishing, feedback, relearning, refining, and continual improvement.

Amplifying adapted from Silvia Rosenthal Tolisano at Langwitches.org
